

BSAFE RELEASES BSAFE/ENTERPRISE SECURITY FOR IBM i 6.1 WITH ENHANCED REPORT GENERATOR FUNCTIONALITY, PRE-DEFINED REPORTS

Englewood, New Jersey, and Herzliya, Israel – March 10, 2010, Bsafe Information Systems announced today, the general availability of Bsafe/Enterprise Security software version 6.1 for IBM System i. Major new capabilities introduced in version 6.1 include a new Report Generator with hundreds of pre-defined compliance related reports, enhanced multi system capabilities and a new Identity Management module.

Report Generator

The new Report Generator has been redesigned and includes a freshly designed interface. The new interface allows multiple reports to be aggregated into report folders. In addition, an integrated job scheduler allows all the reports included within a folder to be run with a single command. Beyond the extensive multi system/partition reporting capabilities offered on all natively accessible audit data such as system journal, file journal, TCP/IP network events, and SQL Statements the Report Generator leverages proprietary audit logs activated by the Bsafe/Enterprise Security audit policy to allow reporting on IP Packet events, Bsafe/Policy Compliance Manager deviation events and many more. A new import/export function has been created as well, to allow quick report propagation across the enterprise.

Compliance Made Easy

Based on extensive regulatory experience version 6.1 includes complete libraries of market tested pre-defined regulatory and category specific reports. Regulations such as PCI, HIPAA and SOX have a vast list of reports. Reporting categories such as TCP/IP Network activity, PTF, Field Level Audit, Object Authority, System Audit and System Values are all ready to use out of the box.

Identity Management and Profile provisioning

Version 6.1 includes a remarkable set of capabilities in the area of multi system and policy based user profile management & provisioning. These functions permit tighter integration of Bsafe/Enterprise Security into an organization's identity management and business application processes.

About Bsafe Information Systems

Bsafe/Information Systems provides compliance and security software products for IBM Power i (AS/400) and IBM Mainframe server platforms. Bsafe/Enterprise Security offers an unparalleled combination of access management, monitoring, auditing, reporting, IDS alerting and general security management.

For decades Bsafe products have been synonymous with ease of use, providing security and compliance solutions within mission critical environments. Its latest product, the Bsafe/Cross Platform Audit provides Security Event Management for companies using IBM Power i and/or IBM Mainframe servers. Through the Cross Platform Audit, organizations can correlate IBM Mainframe, IBM Power i, Windows, AIX, Linux, SQL Server and DB events utilizing online logs, reports and dashboards.

Companies that have adopted Bsafe products include: Prudential, AXA, AIG, Alico, Assurant, Societe Generale, The Royal Bank of Scotland, CIBC, Western Union, Intesa-San Paolo, Boehringer Ingelheim, Schering Plough, Honda, BMW, TRW, Borg Warner, Sony, Yamaha, Konica, Toshiba, Makita, Mitsubishi, Sumitomo, Delhaize, Pitney Bowes, FTD, and Adecco.
