

Bsafe/Cross Platform Audit for Windows and Active Directory

Event Logs

The Bsafe/Enterprise Security Manager allows you to view Windows event logs such as the application, security and system event logs. For each of these applications you can define Windows event log properties and audit policy.

Cross Platform Audit

- The Bsafe/Enterprise Manager supports the following platforms:
 - System i / iSeries
 - System z / Mainframes
 - MS Windows / Active Directory
 - MS SQL
 - System p / AIX
- Supports data import from different platforms
- Has dynamic filters
- Supports global users and IDM (identity management)
- Cross Platform Audit logs and reports:
 - Consolidated Cross-Platform Audit
 - CPA Analyzer
 - CPA Reports
- The Cross Platform Audit Reports can be output in many different formats such as: text, csv, quick report, adobe pdf and excel.
- The Cross Platform Audit reports can be submitted, scheduled and sent by email.

Cross Platform Analyzer

The Bsafe/Enterprise Security Manager can analyze all the above-mentioned platforms and output reports in many formats such as tables, statistical graphs, distribution and summary reports. Can handle more than 100 millions entries.

MS SQL Servers

- SQL statements
- System Audit
- Data Audit field value before and after changes
- Setting of audit policy for all 3 above-mentioned applications

Windows Server Policy Management

- Active Directory
- SQL Server: System, SQL Statements, Database, Users

Windows Servers SOX Compliance

- Active Directory Account Policy (i.e. user accounts, containers)
- Active Directory Group Account
- Active Directory Group Membership
- File Permissions
- File Security Audit Definitions
- Folder Sharing Permissions
- Password Settings

System Tray Applications

The system tray includes the following applications:

- MS SQL Server Audit
- Scheduled Audit Data Imports
- Importing of Bsafe Definitions
- Clearing of Cross-Platform Database
- Source Computers
- Cross-Platform Control Panel
- Creation of Tables in Target Database
- Setting up of connection Parameters
- Update of License Key

New Bsafe/Enterprise Security Manager Windows Module

Multiple Windows server domains and IP addresses displayed in the Bsafe/Enterprise Security tree.

Each includes the following local event logs:

- Cross Platform Audit
- Cross Platform Analyzer
- MS SQL Servers
- SOX Compliance
